METAL CRAFT

In tune with the latest trends use Metal Craft Furniture, be a Saviour of Nature...

Save Green Go Metallic

Why you should go for Metal Craft Furniture

Even to this decade of 21st century some people still think that wood is the best thing for furniture. This mindset is one of windows that let us see that people are not updating themselves enough. This mindset also makes it clear that most people are not environmentally conscious. As for furniture, homeowners and business owners all over the world are now willing to experiment something different, especially owing to the 'go green' trend.

If you are to observe judiciously, you will see that "wood mindset is obsolete and wood is never a good choice to use in constant-use environments - be it a home, a business firm or an office, etc. Wooden furniture, if broken, can pose serious risk for people living and/or working there.

Metal Craft Furniture, on the other hand, is or has already been a much better choice for constant-use environments Metal Craft Furniture products that we manufacture in our factory offer you safety, durability, peace of mind, etc. in addition to the pride of being an environmentally conscious citizen of the nation. We can proudly say that our products last long too. Moreover, in our factories and outlets, you are likely to get some exceptional aesthetic options. We have a range of finishes-rounded edges, a variety of colours and laminate accents, etc. Unlike some people think, metal furniture is not monotonous as it comes in different styles and designs that can be as good-looking as the wooden ones.

There are numbers of other reasons why prudent individuals prefer Metal Craft Furniture to Wood Furniture! Here are some:

1. Strength

A noteworthy feature of wood is "heavy" but not "strong" No one can say wooden products are stronger than metal products. The ones that we manufacture in our factory are really strong. We, Bharati Furniture, have solid reason to boast of our products that are engineered for strength and durability, and they are fully welded too.

Let's compare :

A. WOOD Double Bed

Weight : 50 to 80 kg sleeps two people up to 100 or 120 kg

B. Bharati Metal Double Bed

Weight : 25 to 50 kg sleeps two/three people up to 200 or 250 kg

2. Bedbugs

if your building, house or office gets a steady stream of people, bedbugs shall make their way into your place by traveling on your visitor's body, clothes, baggage, etc. Once bedbugs land in your much-cared area, they will inevitably make their way onto the furnishings- eventually finding refuge in the crevices and holes in the wood. Crevices and holes are havens for these pests. A place with wooden furniture is invariably at higher risk of a bedbug outbreak-any month, any year. It is needless to say that bedbugs can't penetrate metal craft products and all our products have zero crevices and holes. These insects have nowhere to burrow and hide.

3. Affordable

Did you know that in today's word metal furniture comes with affordable prices unlike wood? And, the replacement cyo is not frequent-it helps to save your money!

4. Eco-friendly Products for Eco-conscious Individuals

Wood is biodegradable but not recyclable and rarely reusable Most wood cannot be reused. It's because when woode products are bent, cracked or broken, they are highly unlikely that they will be used to build another product.

Our metal products, however, can be recycled and used again for a variety of things, even if an item somehow manages to become damaged. So, if you are an eco-conscious person, please note that all our products are made of high quality robust materials and they are all eco-friendly things.

Steel furniture deserves a special mention here because steel is the most recycled material on earth according to the American Iron and Steel Institute. The USA understands the importance of metal furniture and it has already started "GREENGUARD" certified drive to encourage metal furniture and indoor air quality and discourage cutting down of trees and exposure to chemicals and other pollutants. This certificate is recognized throughout the world. Wikipedia reads The Greenguard Environmental Institute (corporately styled "GREENGUARD") is an industry-independent organization that aims to protect human health and improve quality of life by enhancing indoor air quality and reducing people's exposure to chemicals and other pollutants. As an ISO-IEC Guide 65 1996 accredited, third-party certifying body, the Greenguard Environmental Institute certifies products and materials for low chemical emissions and serves as a public resource for choosing healthier products and materials for indoor environments In 2011, UL Environment, a business unit of UL (Underwriters Laboratories) acquired Greenguard Environmental Institute

5. Durability

It is sad but true that most people tend not to treat furniture in offices, business firms, etc. as gently as they would treat the chairs, beds and tables in their own homes. This is one of the reasons why wooden products are always more vulnerable and are not "long lasting"

This is true that there are some wooden products on the market that are made of thick wood making them more durable than normal wooden products. Nonetheless, there is still no guarantee that the wood won't split, be broken, be easily burnt, etc. Wood always keeps you concerned. Our metal craft furniture products, on the other hand, stand the test of time, safety and provide a durability solution—standing firm and looking great day in and day out year after year. What's more, our metal craft products can withstand climate changes better than any other material. This means keep a chair/table in the garden, on the balcony, etc.—the monsoons or the summers—you do not need to bother to get the furniture inside.

6. If you are a wood fan yet environmentally conscious

As you already know environmental pollution is posing a huge challenge to our life. Hence, metal furniture is the only recourse—the right choice. We are proud to proclaim that our metal craft products do not involve cutting down of trees. Despite this fact, if you are a wood fan yet an environmentally conscious person, you can go for our wood-metal combination furniture. Or you can also opt for furniture painted in natural colours that looks exactly like wood. It's a fabulous idea, isn't it?

7. Space-friendly, comparatively lightweight and portable, anti-scratch and anti-slip pads, easy-to-clean, etc.

Our products are well-built and well-trimmed, which means they do not take much space and can easily fit even in small areas. They can be handy for small apartments. Our metal furniture products are much lighter than wooden furniture products and they can be easily carried into another room and another apartment house.

We also use good quality anti-scratch and anti-slip furniture pads/wheels. These carefully crafted devices are fixed to the bottom of furniture legs to prevent scratches, dents and slips in or on the floor.

Metal furniture does allow easier clean up and tolerates pest-fighting chemicals better than wood due to its less absorbent surface.

8. Fireproof

All our product structures are fireproof. If there is a fire breakout, your furniture, except cushion seats, will remain unharmed—saving your money.

If you are looking to get your home or office done up, in tune with the latest trends, get in touch with Bharali Furniture today!

Product Name : OLIVE (Dining 6 Seater)
Material : METAL
Model No. : M0001

Product Name : ASPEN (Dining 4 Seater)
